

LIBERO COMMENCES INITIAL EXPLORATION DRILL PROGRAM AT BIG RED IN THE GOLDEN TRIANGLE

September 19, 2019 – **Libero Copper & Gold Corporation (TSX-V: LBC, OTCQB: LBCMF)** is pleased to announce receipt of a five year area based exploration permit for the Big Red property in the Golden Triangle in British Columbia, Canada. The permit includes both geophysics and surface drilling.

Libero is commencing an initial 2,000 metre six hole exploration program targeting both the Ridge and Copper Bowl porphyry gold-copper targets. Libero will release drill results once received, compiled and interpreted.

Libero recently announced a significant new gold discovery at Copper Bowl where five contiguous 50 metre continuous rock chip samples returned intervals of 2.91 grams per tonne gold over 250 metres including 6.14 grams per tonne gold over 100 metres in two contiguous samples. (news release dated [September 5, 2019](#))

The technical information contained in this news release has been reviewed and approved by Libero's Executive Vice President of Exploration, Leo Hathaway P.Geo., who is a Qualified Person as defined under NI 43-101

About the Big Red Porphyry Gold-Copper Property

Big Red comprises 20 contiguous claims totalling 26,000 hectares in northwestern British Columbia, 45 kilometres southwest of Telegraph Creek along the Glenora Road. Big Red lies within the Golden Triangle 70 kilometres north of Galore Creek and 80 kilometres west of GT Gold's Saddle discovery. Please see Libero's [flickr](#) site for photographs.

The Golden Triangle is a geological province of prodigious copper and gold mineralisation and host to some of Canada's most famous mines, including Premier, Red Chris, Snip, Brucejack and Eskay Creek. Within the Golden Triangle porphyry copper and gold, epithermal gold and silver and volcanogenic massive sulfide styles of mineralisation have all been recognised. At Big Red all three of these styles exist, indicating that a large mineralised system has been preserved from erosion. The primary porphyry gold-copper targets are peripheral to a distinct large magnetic-high feature and coincide with a radiometric potassium anomaly, copper, gold and molybdenum anomalies and a mapped Jurassic aged porphyry intrusion.

About Libero Copper & Gold

Libero holds a collection of porphyry deposits throughout the Americas in prolific but stable jurisdictions. The portfolio includes both exploration properties such as Big Red, a new gold discovery in the Golden Triangle, Canada, and high-quality deposits with significant resources but without any fatal flaws or significant holding costs. The Tomichi deposit in the United States and the Mocoa deposit in Colombia, both contain large inferred mineral resources. In total, the Mocoa and Tomichi properties contain 7.9 billion pounds of copper and 1.1 billion pounds of molybdenum. These assets are being advanced by a highly disciplined and seasoned professional team with successful track records of discovery, resource development, and permitting in the Americas.
